

Tableau Worksheet Visualizations

Objective

The objective of these Tableau worksheets is to present key agricultural production metrics and analyze historical yield trends across India. These visualizations provide an overview of agricultural performance and help users understand long-term production patterns using interactive charts.

KPIs – Total Production & Total Yield

Description

This worksheet displays the Key Performance Indicators (KPIs) of India's agricultural crop production dataset. The KPI cards provide a high-level summary of the overall production and yield from **1997 to 2021**.

The worksheet presents:

- **Total Production:** 330,997.84 Million Units
- **Total Yield:** 27.43 Million
- **Total Cultivated Area:** 4,031.13 Million Hectares

These KPIs offer a quick overview of the agricultural output and productivity across all states, crops, seasons, and years included in the dataset.

Trend of Agricultural Yield (1997–2021)

Description

This worksheet presents a **line chart** illustrating the year-wise trend of agricultural yield in India from **1997–98 to 2020–21**. The visualization shows a gradual increase in agricultural yield over the years, reflecting improvements in farming practices, irrigation facilities, high-yield crop varieties, and government support programs.

Figure 2: Trend of Agricultural Yield (1997–2021)

Key Insights

- KPI cards provide a quick summary of total agricultural production, yield, and cultivated area.
- The line chart highlights long-term yield growth from 1997 to 2021.
- The visualizations help identify productivity trends and support data-driven agricultural planning.
- These worksheets serve as the foundation for building the final interactive Tableau dashboard.

Conclusion

The Tableau worksheets successfully present both summary metrics and historical trends of India's agricultural crop production. The KPI worksheet offers a snapshot of the overall agricultural performance, while the yield trend visualization enables detailed analysis of year-wise productivity. Together, these visualizations support effective decision-making for farmers, policymakers, researchers, and agribusiness investors.
