

Tableau Worksheet – Map and Bar Chart Analysis

Objective

The objective of this worksheet is to visualize the geographical distribution of agricultural production across Indian states and compare the cultivated area of major crops. These visualizations help identify high-production regions and understand the cultivation patterns of different crops, enabling informed agricultural planning and decision-making.

Description

This Tableau worksheet consists of two visualizations that provide valuable insights into India's agricultural sector. The first visualization is a **State-wise Agricultural Production Distribution Map**, which displays agricultural production across Indian states using a choropleth map. Different shades represent varying production levels, allowing users to easily identify high- and low-producing states. This visualization supports regional analysis and policy planning.

State-wise Agricultural Production Distribution (India Map)

Description

This worksheet displays a choropleth map of India showing the state-wise distribution of agricultural production. States are color-coded according to their production levels, making it easy to identify regions with high agricultural output.

Key Insights

- Displays agricultural production across Indian states.
- Highlights high-producing and low-producing regions.
- Supports regional agricultural analysis.

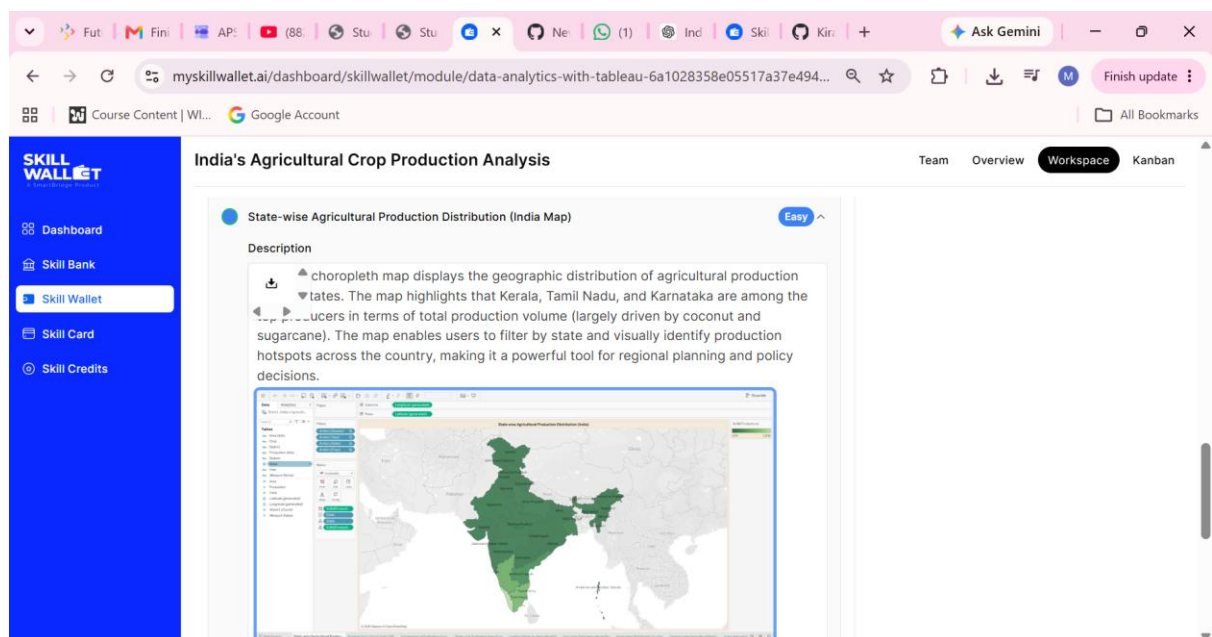

Figure 1: State-wise Agricultural Production Distribution (India Map)

Comparison of Cultivated Area by Crop

Description

This worksheet presents a horizontal bar chart comparing the cultivated area of major crops grown in India. It provides a clear comparison of land utilization among different crops and helps identify crops with the largest cultivated area.

Key Insights

- Compares cultivated area across major crops.
- Identifies crops with the highest cultivation area.
- Supports crop-wise agricultural planning.
- Enables quick comparison of agricultural land utilization.

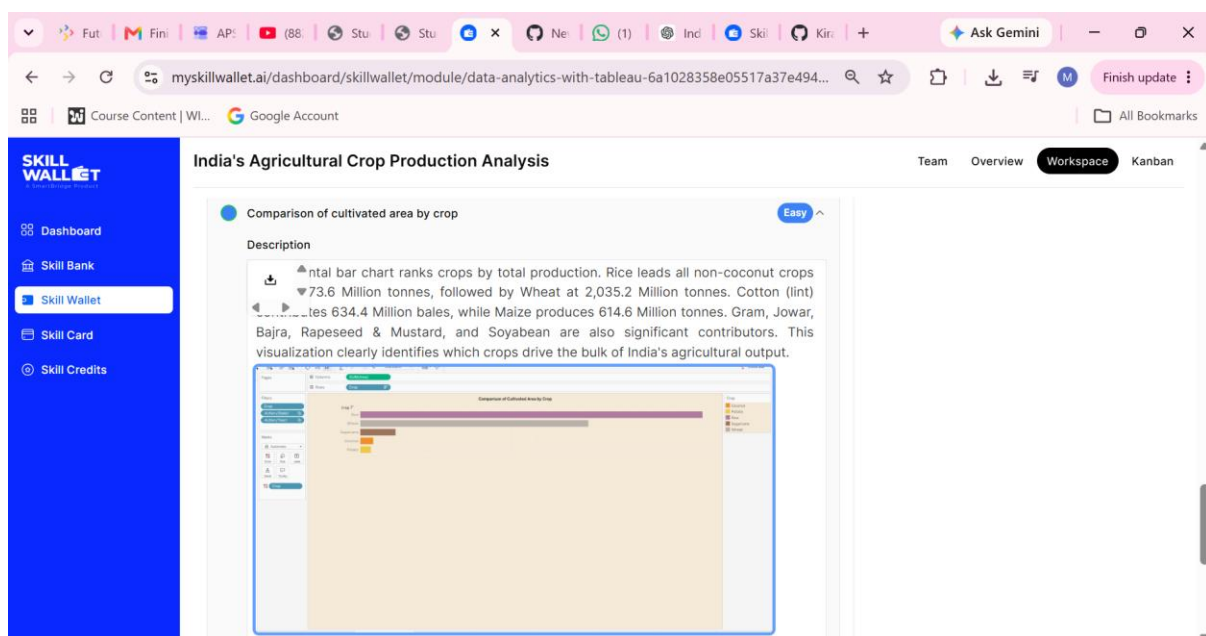

Figure 2: Comparison of Cultivated Area by Crop

Conclusion

The Map and Bar Chart visualizations provide valuable insights into India's agricultural landscape. The state-wise map highlights regional production patterns, while the cultivated area comparison identifies the most extensively grown crops. Together, these visualizations support data-driven decision-making for farmers, policymakers, and agribusiness stakeholders.
